

## Transcript – How Do You Look at Things?

How do you look at things?

Recall the three perspectives we explored in a previous module.

Do you see the forest, the tree, or the leaf?

As we explore the Revised Math TEKS (2012), we will at times look at the big picture, or forest-level view. At other times, we will zoom in a bit to see the trees, or zoom in even further to take a leaf-level look.

As we prepare for the implementation of the revised TEKS (2012) for high school courses in the 2015–2016 school year, we will need to consider the curriculum gaps during the transition. We will also need to consider the instructional changes in the curriculum as students enter high school. How will students' experiences be different with the implementation of the revised TEKS (2012) in the kindergarten through grade 8 curriculum during the 2014–2015 school year?

In this next activity, we will spend time looking at the tree level.
